Contents of Volume 141

Number 1, February 1985

Rudolf Seibl and Hans Wolf. Mapping of Epstein-Barr Virus Proteins on the Genome by Translation of Hybrid-Selected RNA from Induced P3HR1 Cells and Induced Raji Cells ... 1

Alberto N. Sarachu, Marianne J. Huisman, Lous Van Vloten-Doting, and John F. Bol. Alfalfa Mosaic Virus Temperature-Sensitive Mutants. I. Mutants Defective in Viral RNA and Protein Synthesis ... 14

Marianne J. Huisman, Alberto N. Sarachu, Fieke Alblas, and John F. Bol. Alfalfa Mosaic Virus Temperature-Sensitive Mutants. II. Early Functions Encoded by RNAs 1 and 2 ... 23

Akinori Ishimoto, Akio Adachi, Koji Sakai, and Mutsushi Matsuyama. Long Terminal Repeat of Friend-MCF Virus Contains the Sequence Responsible for Erythroid Leukemia ... 30

R. Virudachalam, Melissa Harrington, John E. Johnson, and John L. Markley. ^{1}H, ^{13}C, and ^{31}P Nuclear Magnetic Resonance Studies of Cowpea Mosaic Virus: Detection and Exchange of Polyamines and Dynamics of the RNA ... 43

Carol Waghorne and C. R. Fuerst. Involvement of the *htpR* Gene Product of *Escherichia coli* in Phage λ Development ... 51

S. Chatterjee, J. Bradac, and E. Hunter. A Rapid Screening Procedure for the Isolation of Non-conditional Replication Mutants of Mason-Pfizer Monkey Virus: Identification of a Mutant Defective in *pol* ... 65

Irwin Davidson and Nigel D. Stow. Expression of an Immediate Early Polypeptide and Activation of a Viral Origin of DNA Replication in Cells Containing a Fragment of Herpes Simplex Virus DNA ... 77

S. Beushausen and S. Dales. *In Vivo* and *in Vitro* Models of Demyelinating Disease. XI. Tropism and Differentiation Regulate the Infectious Process of Coronaviruses in Primary Explants of the Rat CNS ... 89

Kailash C. Gupta and D. W. Kingsbury. Polytranscripts of Sendai Virus Do Not Contain Intervening Polyadenylate Sequences ... 102

Marc Sitbon, Jane Nishio, Kathy Wehrly, Donald Lodmell, and Bruce Chesebro. Use of a Focal Immunofluorescence Assay on Live Cells for Quantitation of Retroviruses: Distinction of Host Range Classes in Virus Mixtures and Biological Cloning of Dual-Tropic Murine Leukemia Viruses 110

Bruce Chesebro and Kathy Wehrly. Different Murine Cell Lines Manifest Unique Patterns of Interference to Superinfection by Murine Leukemia Viruses ... 119

H. L. Robinson and B. D. Miles. Avian Leukosis Virus-Induced Osteopetrosis Is Associated with the Persistent Synthesis of Viral DNA ... 130

Short Communications

G. Herrler, R. Rott, and H.-D. Klenk. Neuraminic Acid Is Involved in the Binding of Influenza C Virus to Erythrocytes ... 144

Adam P. Geballe, Peter Ventura, Linda Stowring, and Ashley T. Haase. Quantitative Analysis of Visna Virus Replication *in Vivo* ... 148

Lawrence P. Aggerbeck and Darrell L. Peterson. Electron Microscopic and Solution X-Ray Scattering Observations on the Structure of Hepatitis B Surface Antigen ... 155

David Derse, A. Jennifer Diniak, James W. Casey, and Prescott L. Deininger. Nucleotide Sequence and Structure of Integrated Bovine Leukemia Virus Long Terminal Repeats ... 162

Thomas J. Schnitzer. Protein Coding Assignment of the S Genes of the Avian Reovirus S1133 167

Author Index for Volume 141, Number 1 ... 171

Number 2, March 1985

Donald L. Jarvis and Janet S. Butel. Modification of Simian Virus 40 Large Tumor Antigen by Glycosylation ... 173

José L. Carrascosa, José M. Carazo, Carmen Ibañez, and A. Santisteban. Structure of Phage $\phi 29$ Connector Protein Assembled *in Vivo* ... 190

Veronica (Ruszala) Mallon and J. A. Holowczak. Vaccinia Virus Antigens on the Plasma Membrane of Infected Cells. I. Viral Antigens Transferred from Infecting Virus Particles and Synthesized after Infection ... 201

Hans K. Adldinger, Hajo Delius, Ulrich K. Freese, Jill Clarke, and Georg W. Bornkamm. A Putative Transforming Gene of Jijoye Virus Differs from That of Epstein-Barr Virus Prototypes 221

Susana Lopez, John R. Bell, Ellen G. Strauss, and James H. Strauss. The Nonstructural Proteins of Sindbis Virus as Studied with an Antibody Specific for the C Terminus of the Nonstructural Readthrough Polyprotein ... 2
S. G. Faragher, C. A. Hutchison, and L. Dalgarno. Analysis of Ross River Virus Genomic RNA Using *Hae*III Digests of Single-Stranded cDNA to Infected-Cell RNA and Virion RNA ... 2
Anu Jalanko and Hans Söderlund. The Repeated Regions of Semliki Forest Virus Defective-Interfering RNA Interferes with the Encapsidation Process of the Standard Virus ... 2
C. S. Flordellis, N. C. Kan, J. A. Lautenberger, K. P. Samuel, C. F. Garon, and T. S. Papas. Analysis of the Cellular Proto-oncogene *mht/raf*: Relationship to the 5′ Sequences of v-*mht* in Avian Carcinoma Virus MH2 and v-*raf* in Murine Sarcoma Virus 3611 ... 2
D. Evans. Isolation and Characterization of Two Temperature-Sensitive Mutants of Cowpea Mosaic Virus ... 2
Peter L. Collins and Gail W. Wertz. The 1A Protein Gene of Human Respiratory Syncytial Virus: Nucleotide Sequence of the mRNA and a Related Polycistronic Transcript ... 2
Roger I. Glass, Jerry Keith, Osamu Nakagomi, Toyoko Nakagomi, Jon Askaa, Albert Z. Kapikian, Robert M. Chanock, and Jorge Flores. Nucleotide Sequence of the Structural Glycoprotein VP7 Gene of Nebraska Calf Diarrhea Virus Rotavirus: Comparison with Homologous Genes from Four Strains of Human and Animal Rotaviruses ... 2
Short Communications
Y. Kitamura, M. Masuda, and H. Yoshikura. Effect of Myelocytic Maturation of HL60 Cells on Replication of Influenza and Polioviruses ... 2
K. F. M. Ready and J. B. Bancroft. The Assembly of Barrel Cactus Virus Protein ... 3
Anna M. Bartoletti, Mauro Tognon, Roberto Manservigi, and Anna Mannini-Palenzona. Characterization of Virus Obtained from MDBK Cells Persistently Infected with a Variant of Herpes Simplex Virus Type 1 Strain MP [HSV-1(MP)] ... 3
L. Stowring, A. T. Haase, G. Petursson, G. Georgsson, P. Palsson, R. Lutley, R. Roos, and S. Szuchet. Detection of Visna Virus Antigens and RNA in Glial Cells in Foci of Demyelination ... 3
Robert A. Yetter, Wallace Y. Langdon, and Herbert C. Morse III. Characterization of Ecotropic Murine Leukemia Viruses in SJL/J Mice ... 3
Joseph S. Verbeek, Paul de Ruyter, Henri P. J. Bloemers, and Wim J. M. Van de Ven. Molecular Cloning and Characterization of Feline Cellular Genetic Sequences Homologous to the Oncogene of the McDonough Strain of Feline Sarcoma Virus ... 3
D. Akiyoshi, R. Chakerian, G. F. Rohrmann, M. H. Nesson, and G. S. Beaudreau. Cloning and Sequencing of the Granulin Gene from the *Trichoplusia ni* Granulosis Virus ... 3
Julia K. Hyland, Christina M. Rogers, Edward M. Scolnick, Robert B. Stein, Ronald Ellis, and Renato Baserga. Microinjected *ras* Family Oncogenes Stimulate DNA Synthesis in Quiescent Mammalian Cells ... 3

Author Index for Volume 141 ... 3
Subject Index for Volume 141 ... 3

NOTICE TO AUTHORS

Editorial Policy. *Virology* will publish articles on the biological, biochemical, genetic, and biophysical aspects of virus research. All manuscripts should meet the following four basic criteria. *First*, they should report *original* research results. Manuscripts are accepted for review on the understanding that the same or similar work, wholly or in part, has not been and will not be nor is presently submitted for publication elsewhere. *Second*, they should report research that is *fundamental*, rather than applied. Emphasis should be directed at understanding mechanisms by which viruses function, rather than on descriptions of virological phenomena. *Third*, they should report research that is *pioneering* in nature. Authors should clearly understand that space limitations may make it impossible to publish manuscripts that describe work that was performed competently but that does not break new conceptual ground; papers that describe results that have already been obtained with closely related virus or cell systems may be accepted only in exceptional circumstances. *Fourth*, they should be written as concisely as possible, their length being the minimum compatible with a clear presentation and interpretation of the experimental data. Repetition, such as between the Materials and Methods section and figure legends, should be carefully avoided. The Introduction should contain only material relevant to the research that is described; and the Discussion, which should exceed two pages only in exceptional circumstances, should be constructively interpretative and not merely restate the experimental results. Good writing requires careful examination that every word, phrase, and sentence is essential and arranged in logical sequence.

Manuscripts are accepted for review on the understanding that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; that any person cited as a source of personal communications has approved such citations; that locally and nationally prescribed safety regulations governing exposure of laboratory personnel and contamination of the environment have been observed; and that all variant virus and cell strains described or mentioned in the paper will be freely available for distribution upon request to all qualified members of the scientific community. Written verification of these conditions may be required at the Editors' discretion. Articles and any other material published in *Virology* represent the opinions of the author(s) and should not be construed as reflecting the opinions of the Editors and the Publisher.

Manuscripts should be submitted in duplicate to the editorial office of *Virology*, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101, by first class mail in flat form.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Form of Manuscript. Manuscripts should be typewritten (not mimeographed), with wide margins on high quality bond paper, using double or triple spacing throughout. Subdivision of articles into *Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments*, and *References* is recommended. The manuscript must begin with an *Abstract*. In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiment described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given. Reviews of the literature should be restricted to closely pertinent papers. Tables, figures, names, quotations, and bibliography (and all text references to the same) should be carefully checked for errors. A proposed running head of no more than 37 characters should be included.

Figures and Tables. Number all figures consecutively with Arabic numbers and give each one a descriptive legend. All illustrations should be in finished form suitable for reproduction. Figures should be planned to fit the proportion of the printed page (5½″ × 8″, column width: 2½″). Lettering on drawings should be made with a lettering set and should be large enough to take a reduction of 50–60 percent. Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper, if used, should be ruled in blue.

Photographs should be glossy prints with strong contrasts, and the magnification should be indicated by scale. Photographs should be cropped to eliminate background material so that reproduction might be possible without reduction. Grouping of photographs should be indicated. Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numbers, and collected at the end of the manuscript. All tables must have descriptive headings and should be understandable without reference to the text.

References. Names of authors should be mentioned in the text with the year of publication in brackets. References should be listed alphabetically at the end of the paper as follows: Dawson, W. O., and Dodds, A. (1982). Characterization of subgenomic double-stranded RNAs from virus-infected plants. *Biochem. Biophys. Res. Commun.* **107,** 1230–1235. **See, however, the instructions** for *Short Communications* **below.** The names of journals should be abbreviated according to the *Chemical Abstracts Service Source Index*, 1980. References to books should include: author's name, year of publication, title of book (editor of book, if any), edition (if other than first), publisher, and place of publication.

Include in the reference list articles that are "in press," but incorporate in text or use footnotes fo "manuscript in preparation," "unpublished observations," and "personal communication."

Abbreviations and Symbols. Where abbreviations are employed the author is asked to follow the usag established by *Chemical Abstracts Service Source Index*, 1980.

Nomenclature of Microorganisms. Binomial Latin names, with authorities, should be used in accordanc with the International Rules of Nomenclature. Binomials should be underlined in the typewritten copy. specific name should not be used without an accompanying capitalized generic name. The generic name fo each species should be written in full where it first occurs in the text and again in the summary. Where th generic name appears frequently in the text it may be abbreviated by using the initial letter.

Short Communications. This section is open to short preliminary reports of important findings. The should not exceed six double-spaced typewritten pages including tables and illustrations. Do not use an section headings. All short communications must have abstracts. Illustrative material should be kept to minimum (usually not more than one table or figure). Literature should be cited as follows: References shoul be given serial numbers in the text and listed consecutively at the end of the text (serial number, autho name of journal, volume, first and last page, and year of publication).

This section does not provide an accelerated means of publication, but is designed to offer the opportunit to present in brief form noteworthy results of works in progress.

Proofs. Proofs will be sent to the author with a reprint order form. Authors will be charged for alteration in excess of 10% of the cost of composition.

Reprints. Fifty copies of each article are granted free of charge and authors may order additional quantitie
